

B Local LR hotspots after reference dropout

Mean local Moran I: 0.0276 $\rightarrow$ 0.0043 | Absolute change: $\Delta I = -0.0233$

Fixed-threshold hotspots: 110 $\rightarrow$ 84

Metrics use the common supported-spot set; hotspot threshold is fixed at the CytoSPACE-dropout P95 (Local Moran I ≥ 0.258). Gray spots are Stage3B-withheld.
